

Revolutionary AccuLok™ Cover Design.

Finally, a Cover That Lasts!

Are you replacing your cover every few years because it is water logged and too heavy to lift, even compromising the cover lifter? All that water absorption also compromises the thermal qualities and you end up with a soggy, bulky cover that no longer even insulates. Hundred of dollars spent and you are forced to replace this with the same design, same quality...until now!

PDC Spas is proud to offer the AccuLok™ cover with revolutionary technology and a full 7 year warranty. Choose a quality built cover that performs better, lasts longer and saves you money.

Lock In Heat, Lock Out Water. How We Do It.

Extensive research by PDC Spas to correct the traditional cover design and develop a cover that is more thermally efficient and resistant to water vapor was a long task for this manufacturer. Customers would comment and complain about heat escaping from the cover center fold. Steam billowed out in the hinge / fold area causing unnecessary energy consumption. The exclusive AccuLok™ hot tub cover design traps escaping heat, minimizing heat loss and saving operating costs. A full 7" hem heat shield seamlessly surrounds the unit, sewn from the top of the foam as opposed to the bottom. This traps escaping heat while the insulating center pillow stops heat from radiating in the fold. The effect of this unique design is documented with thermal imaging results, bright areas indicating escaping heat.

A Tighter Fit for a Tighter Budget

Four locking straps are standard with each AccuLok™ hot tub cover, although ours are not just an ordinary strap. Ours are sewn from the top of the cover and over the skirt. This advanced design holds the skirt securely against the cabinet preventing outside cold air and wind from entering the hot tub. The “others” cover design with their strap beneath the skirt allows wind to blow open the skirt exposing warm water to outside elements, thereby costing you more to maintain hot tub temperature. Save with AccuLok™!

Take a Look, Our Difference is Obvious

ONLY Acculok™ hot tub covers feature a unique layer of water vapor barrier. Years of scientific research, thanks to PDC Spas, have resulted in a cover that has 400% more resistance to water vapor absorption than any other hot tub cover on the market! Open the side zipper and take a look at the inside core, AccuLok™ has a heat sealed proprietary thick black plastic barrier protecting the foam core, unlike most standard covers using a clear, thin, taped wrap.

Points of Distinction

- AccuLok proven technology resists water weight gain up to 400% over others.
- Revolutionary heat trapping design has proven significant energy savings over other standard cover design.
- Steel reinforcements, 13.2 R value, virgin foam—no regrind foam.
- Industry leading limited 7 year warranty. Buy once and buy right.
- Sold and serviced in the USA with personalized, non-automated customer service backed by a staff with decades of industry experience.

Why don't all retailers offer AccuLok™ with proven performance; they choose to sell revenue generating standard replacements. PDC Spas chooses customer satisfaction by designing and offering the best cover on the market.
