

USDA Licensed Equine Plasma

FOR FAILURE OF PASSIVE TRANSFER

HiGamm-Equi

Proven Protection.

Each 1000 ml unit contains IgG at 2800 mg/dl. 1 unit will increase a normal foal's IgG by about 400 mg/dl. To assure an Insurance requirement of 800 mg/dl we recommend administering 2 units.

FOR PROTECTION FROM RHODOCOCCLUS EQUI

Pneumomune-Re

Used as an aid in the prevention or reduction in the severity of pneumonia associated with *Rhodococcus equi*.

Recommended: 1st dose within 24 hours of life and second dose at 3 weeks of age.

Alternatively, recent publications suggest administering 2 liters within 24 hours of life is adequate.

Antigen Select Equine Plasma

The "Antigen Select Series" of products has been designed to allow you to select plasma based on a donors vaccination history. These products are created from a designated donor pool that is hyperimmunized with specific equine associated antigens. **All Antigen Select Series products come with a Certificate of Assurance** that states our quality systems assurance of product sterility, donor disease testing and antibody testing, if available. All equine products are tested free of Equine Parvovirus - Hepatitis. Ten year frozen shelf life.

OPTIONS FOR FIGHTING DIARRHEA

Clostridium Perfringens C, D & F

Enteric Select (Antigens: J5 E.coli bacterin with LPS, Toxoid of Sal. Typh, Clostridium Perfringens C and D, and Rotavirus)
