Secure – Heartland Mobile Services delivers two options for securing card present data

- • Ingenico iCMP – Supports EMV Contact, swipe and NFC (Apple Pay, Android pay, etc.), with market leading Voltage encryption to protect card data. This Heartland Secure solution includes our breach warranty at no additional cost!
- • Rambler 3 – An AES-encrypting audio-jack reader to keep transactions secure.

All transaction data is encrypted in transit, so card data is never stored on your mobile device. The app is designed and written to the PCI PA-DSS compliance standard!

Cost-Effective – There are no middlemen, outside gateways or third party providers to increase your costs — Heartland delivers the entire solution.

Reliable – Heartland Mobile Services is a native iOS app, built by Heartland, one of the most trusted names in payments processing, with years of experience in mobile payments, so you know it works.
